UJIAN PRAKTEK

Standar Kompentensi : Pemrograman Web Kompetensi Dasar : Web Statis Dasar

Kelas/Komp. Keahlian : XI / Rekayasa Perangkat Lunak

Semester/Thn.Pelajaran : Ganjil/2019-2020

Waktu : 60 menit

Soal

- 1. Buatlah script HTML dari output di bawah ke dalam satu file HTML dengan ketentuan:
 - a. Dibuatkan dalam satu file dan diberi nama dengan format *Kelas_Nama Lengkap*, Misal XIRPL1_Mimin Mintarsih.html
 - b. Script diketik serapih mungkin karena masuk ke penilaian dan diketik lengkap tag htmlnya
 - c. Title diisi dengan nama kalian
 - d. File disimpan di di drive D:/ dengan membuat folder **ujian** jadi file D:/ujian/XRPL1_Mimin Mintarsih.html

Output:

Apple's iPhone 5c isn't the low-cost phone you've been waiting for

The iPhone 5c, simply put, is for those who've grown numb to Apple's largely evolutionary takes on its primary iPhone range. It'll attract a younger audience that cares less about finely beveled edges and more about playing *Connect 4* on their iPhone case. It'll cater to the same *crowd that has looked* longingly towards the \$599 (again, off-contract) Moto X -- a phone for the mainstream, and a phone that's as colorful as one's soul. In a way, this is the anti-Moto X. From a price, spec and feature perspective, it's a match that's too close to call. The iPhone 5c's camera has an edge on the Moto X, but the *X's Active Display* is a boon for notifications. As these things tend to go, a lot of it boils down to ecosystem preference. The iPhone 5c is being built for the same audience as the <u>flashy iPod nano</u>, and moreover, Apple built it for those on <u>Wall Street</u> who feel that it simply *must* attract new markets to stay atop its game.

Apple never showed intentions of racing the <u>Nexus 7</u> to the bottom in the tablet game, and the *iPhone 5c* is proof that it won't do that in the phone arena, either.

SOAL CSS:

- 2. Buatlah script HTML dan CSS dari output di bawah ke dalam satu file HTML dan satu file CSS terpisah dengan ketentuan:
 - a. Dibuatkan dalam dua file dan diberi nama dengan format *Kelas_Nama Lengkap*, Misal XIRPL1_Mimin Mintarsih_layout.html dan dengan file css styles.css
 - b. Script diketik serapih mungkin karena masuk ke penilaian dan diketik lengkap tag html-dan CSS-nya
 - c. Title diisi dengan nama kalian
 - d. File disimpan di di drive D:/ dengan membuat folder **ujian/layout** jadi file D:/ujian/layout/XRPL1_Mimin Mintarsih_layout.html dan D:/ujian/layout/styles.css

- Untuk width dan height disesuaikan dengan kebutuhan
- 2. Di main menu pada saat menu dilewati warna dilewati berubah warna menjadi kuning
- 3. Pewarnaan tidak harus persis sama dengan soal
